HMC ONE
AI STRATEGY. BUILT TO SCALE.

CLIENT CASE STUDY Â· CONSUMER DURABLES MANUFACTURING Â· SALES & MARKETING

ENERGY PRODUCTS Â· NINE PRODUCTS Â· FOUR SITE TYPES

Interactive 3D Solution Selling

Solar, hybrid inverters, battery storage, UPS, stabilisers and EV chargers were sold one brochure at a time. HMC built a browser 3D model that shows all nine working together on a customer's own kind of site, through a full day, a grid failure and a sizing estimate.

~~15%~~ â†’ **39%** proposals with three or more products

9 products
Shown working together
â€“Â² in one model, not nine brochures

4 sites
Site types sales can show
home, shop, factory, fuel station

39%
Proposals with 3+ products
â€“Â² from about 15%

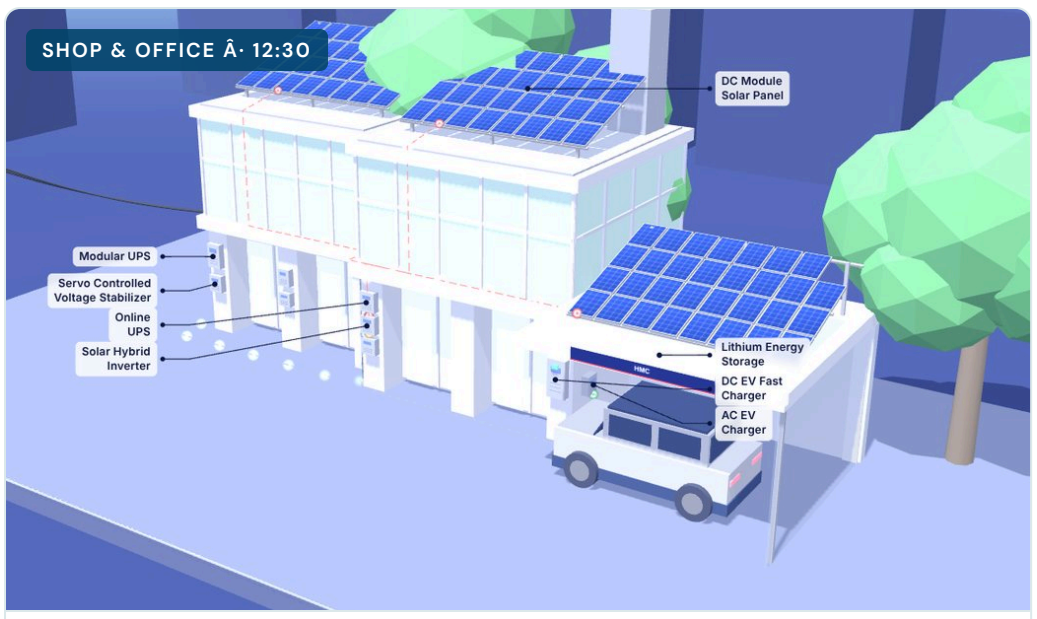

3 days
First meeting to sized proposal
â€“Â¼ from about 2 weeks

Rings: one segment per product, shaded by family (solar, storage, UPS & power, EV); one per site type; 3+ product share with the earlier ~15% inside; 3 days against the ~14-day baseline inside. Figures indicative; validated metrics available on request.

01 The model, as delivered

Stills captured from the live browser model Â· brand signage neutralised

1 **Every product in place.** Rooftop and carport solar, inverter, storage, UPS, stabiliser and two EV chargers on one building, each label opening its product card.

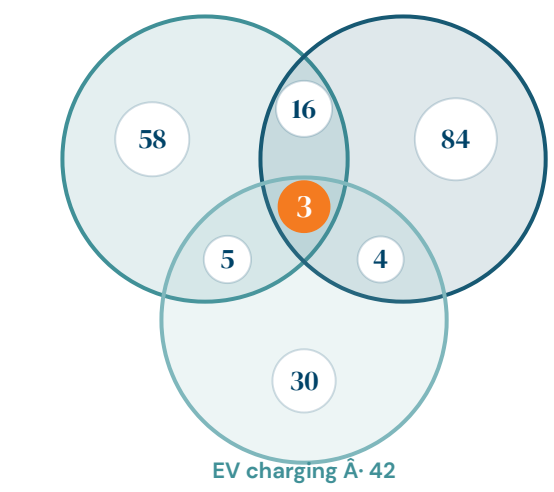

2 **The bad day, made visible.** Street power cut at the evening peak; the site switches to battery and solar with no interruption. Energy figures in the model are indicative simulations.

1	2	3	4	5
Pick the site	**Take the tour**	**Play the day**	**Cut the grid**	**Size a system**
The building that looks like the customer's.	Each product, where it sits and what it does.	Solar at noon, battery in the evening peak.	The site keeps running on battery and solar.	kWp, kWh and savings for this site.

02 Customers buying the system, not the box

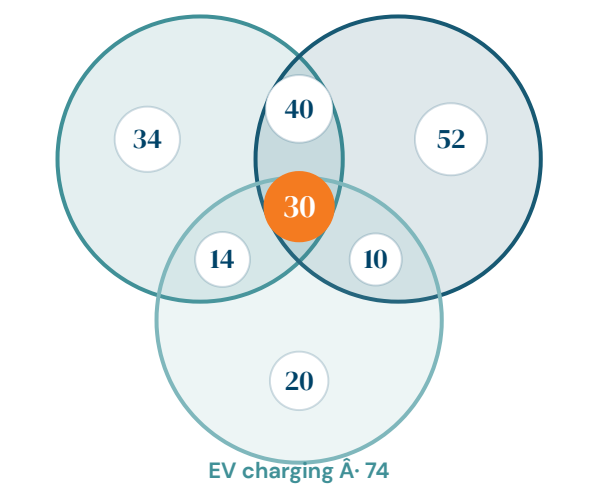

What 200 proposals contained Â· indicative

BEFORE Â· BY PRODUCT FAMILY

28 of 200 (14%) combine 2+ families; 3 all three

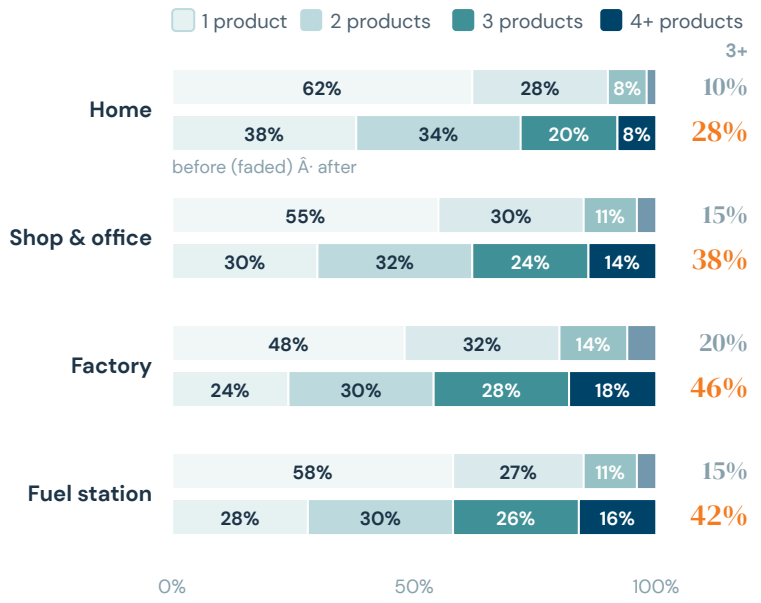

AFTER Â· BY PRODUCT FAMILY

94 of 200 (47%) combine 2+ families; 30 all three

Solar · Storage & backup · EV charging · All three families

PRODUCTS PER PROPOSAL, BY SEGMENT

03 Four pain points, four fixes

How a first meeting runs now

BEFORE
Nine brochures
Each product had its own leaflet; the system story was left to the salesperson.

SITE IN 3D

AFTER
Their building, fully fitted
The customer's kind of building opens with every product in place.

BEFORE
Energy flow is invisible
Where solar goes at noon and what the battery does at 7 pm was hard to explain on paper.

HOURLY ENERGY FLOWS

AFTER
A full day, hour by hour
Coloured flows for solar, battery, grid and EV replace single-line diagrams.

BEFORE
Outages are abstract
"The UPS will take care of it." Customers never saw a sized system carry the site.

LIVE GRID FAILURE

AFTER
The site keeps running
Grid failure shown live, making the case for storage in the room.

BEFORE
Sizing came later
Solar and battery sizes and the savings case arrived weeks later, by spreadsheet.

IN-MEETING SIZING

AFTER
Sized the same day
kWp, kWh and savings estimated in the meeting and shared the same day.

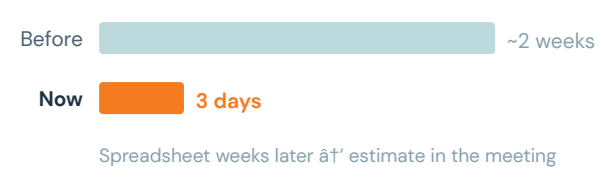

04 Which product, which site

Product Ã— site map built into the model

	Home	Shop	Factory	Fuel stn
Rooftop & carport solar	●	●	●	●
Solar hybrid inverter	●	●	●	●
C&I battery storage	◌	●	●	●
Home battery storage	●	◌	◌	◌
Modular UPS	◌	●	●	●
Online UPS	●	●	●	●
Servo voltage stabiliser	●	●	●	●
DC EV fast charger	◌	●	●	●
AC EV charger	●	●	●	●
Products in each site	6	8	8	8

05 Faster to a proposal

Indicative

Spreadsheet weeks later â†’ estimate in the meeting

Cross-sell
Solar, storage and EV pitched separately â†’ **one system, one proposal**

Reach
Only where a trained salesperson goes â†’ **one file for dealers, website and events**

Delivery
Single HTML file, no install; **works offline after first load**

06 How HMC ran it

1 week	**Discover** Sat in on sales calls; mapped which products sell together and the three questions every customer asks.
1 week	**Design** Four recognisable sites, colour-coded energy flows, five moves for a meeting.
3 weeks	**Build** GenAI-assisted coding on WebGL: procedural 3D, hourly simulation, sizing calculator.
Sales team	**Adopt** Into every first meeting, with a sales playbook.
Dealers & events	**Scale** Dealer training, showroom screens, website and trade-show embed.

What any multi-product maker can borrow

01 — Show the system, not the SKU
Customers buy more of the range once they see the pieces working together.

02 — Make the bad day visible
A live grid failure makes the case for storage better than any spec sheet.

03 — One file travels furthest
A browser model goes to dealers, websites and trade shows without an app.

Built with **three.js / WebGL** Â· **procedural modelling** Â· **hourly energy simulation** Â· **GenAI-assisted coding** Â· **single HTML file** | Prepared by Havish M Consulting Â· Figures indicative; validated metrics available on request.
