HMC ONE
AI STRATEGY. BUILT TO SCALE.

CLIENT CASE STUDY · HOME TEXTILES · MERCHANDISING

TRADE-SHOW STAND · 364 M² · EIGHT COLLECTION STORIES

Store 3D Layout

A 2D floor plan became a walkable 3D stand, so merchandisers could review every room set, sightline and aisle before a single fixture was built.

~~21~~ → 8 days to layout sign-off

2 days
Floor plan to walkable 3D
▼ vs 2–3 weeks of renders

364 m²
Stand area modelled to scale
1 m = 100 px from the plan

23 issues
Layout issues caught before build
▲ fixed in review, not on site

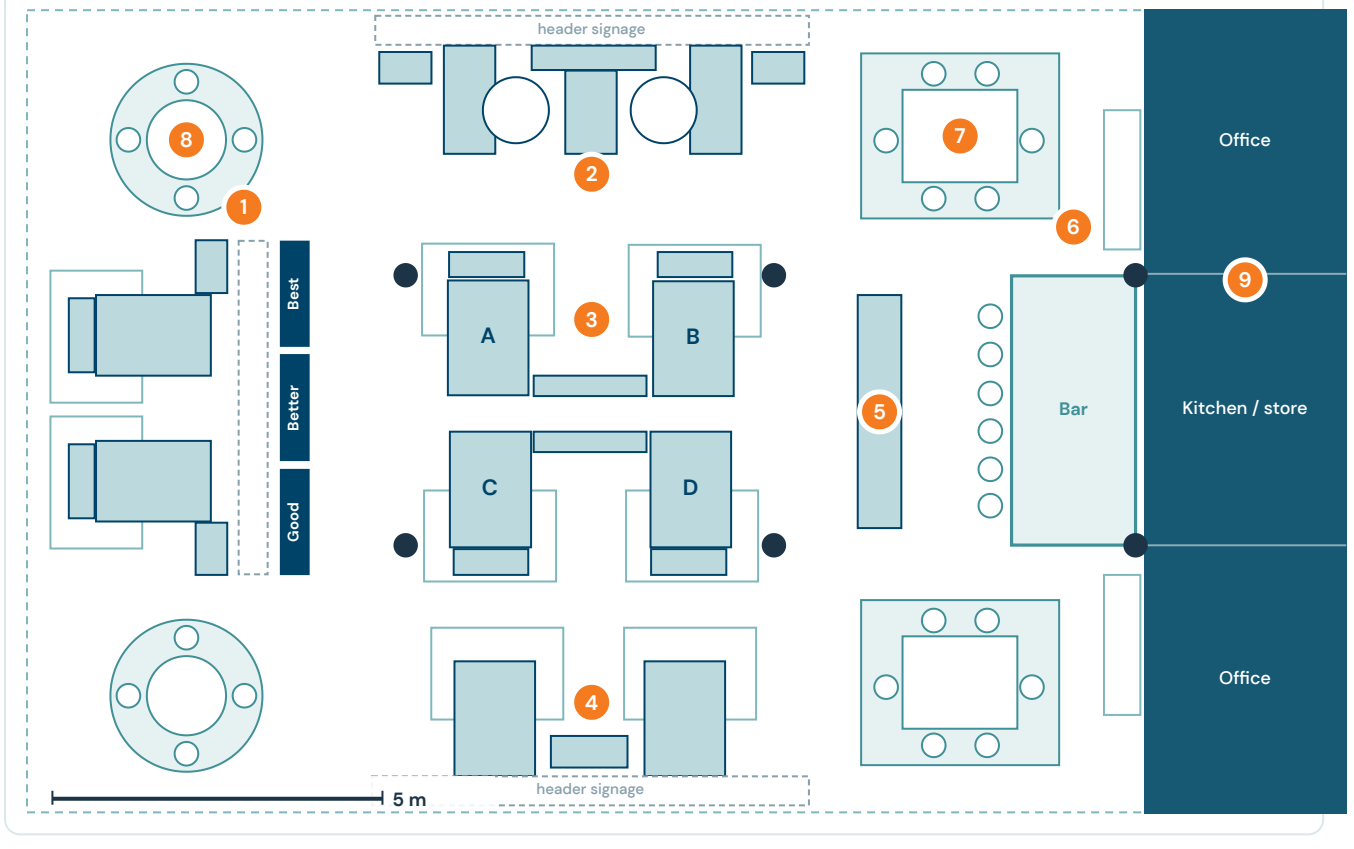

8 days
Days to layout sign-off
▼ 62% vs 21 days

Rings: 2 days against the 2-week low end of render cycles; the 364 m² by zone type (display, experience, back of house, circulation); the 23 issues by type, sightlines in orange; 8 of the former 21 days.

01 The stand, redrawn from the plan

Every fixture placed from the drawing's coordinates · 24.4 m × 14.9 m · 100 px = 1 m

Product display · Customer experience · Back of house · Circulation · Column

THE STAND AT A GLANCE

Facts as built in the model

Footprint	24.4 × 14.9 m
Area	364 m²
Dressed beds	12
Lounges	2
Meeting tables	2 × 6 seats
Hospitality bar	6 seats
Back of house	3 rooms
Towel walls	Good · Better · Best, Beach

Scale read from the drawing: a queen bed is about 140 px, so 100 px = 1 m. Every room set dressed to one standard: bed, duvet, pillows, headboard, bench and rug.

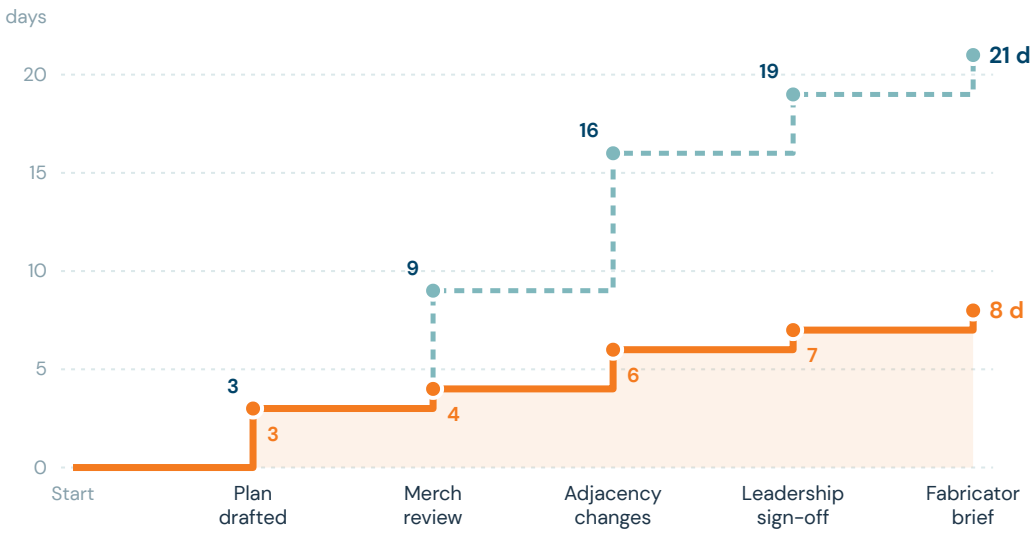

1. **Home-collection bay**, tiered towel walls
2. **Kids licensing** wall
3. **Room sets A–D** with shelving spine
4. **Designer collection**
5. **Beach** towel wall
6. **Hospitality bar**, 6 seats
7. **Meeting rooms** ×2
8. **Lounges** ×2
9. **Back of house**: offices, kitchen

02 Faster sign-off, fewer surprises

From the impact dashboard · indicative

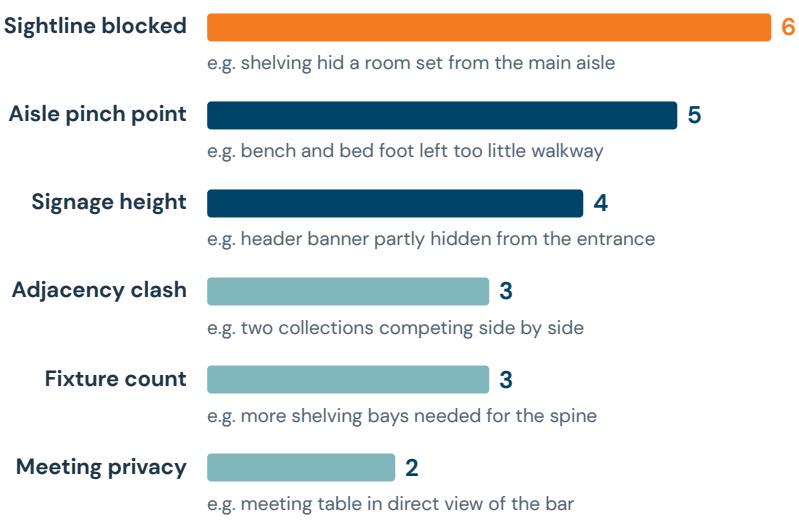

Road to layout sign-off

Cumulative days by stage: 2D plan + renders (dashed) vs 3D model review (orange)

23 layout issues caught in 3D review

By type, with the example the team found on screen instead of on site

03 Four pain points, four fixes

Before → after

BEFORE
Plans hide the story
A 2D drawing showed where beds go, not how a buyer walks from Good to Best or what they see first from the aisle.

BUYER-ROUTE CAMERA VIEWS

AFTER
Journey walked
Aisle, kids, room-set and hospitality views follow the buyer's route.

BEFORE
Adjacencies by email
Which collection faces the aisle, where licensing sits next to hospitality: debated in long threads.

ONE SHARED MODEL

AFTER
Decided live
Merchandising, sales and leadership made adjacency calls together, on screen.

BEFORE
Renders: few and slow
Each agency render showed one fixed angle; every change meant waiting days for a new image.

GENAI-BUILT MODEL

AFTER
Same-day changes
Updated in the model the same day and re-shared as one link.

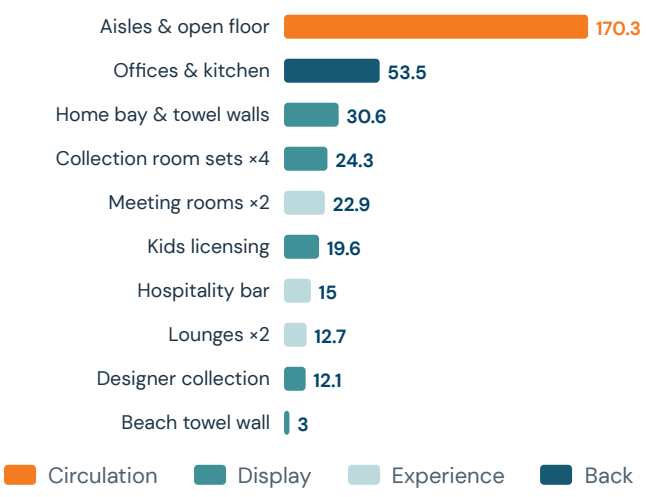

BEFORE
Surprises at build-up
Blocked sightlines, tight aisles and signage heights found on site, when changes cost the most.

REVIEW BEFORE BUILD

AFTER
23 issues fixed early
All resolved before the fabricator brief, which used the model alongside the 2D drawing.

04 Where the 364 m² goes

Approximate m² by zone, from the floor plan

05 Seeing and sharing

How the layout gets decided

SEEING THE LAYOUT		
	BEFORE	2D floor plan and a few fixed renders
	AFTER	A to-scale 3D stand anyone can orbit and zoom
SHARING		
	BEFORE	Large image files and PDFs
	AFTER	One small web file, opens in any browser
CHANGES		
	BEFORE	Days per new render
	AFTER	Updated in the model the same day

06 How HMC ran it

1 day	**Discover**	Floor plan, collection brief and buyer-journey map.
1 day	**Design**	Scale rule, dressing standard and camera-view list.
2 days	**Build**	Claude wrote the model as one web file from the plan's coordinates.
1 week	**Adopt**	Reviewed in the model, not the inbox; fabricator briefing pack.
∞ ongoing	**Scale**	Template and prompt pack for showrooms and retail floors.

What transfers to any retail or showroom team

01 Walk it before you build it
Moving through the space surfaced problems a plan view never shows: blocked sightlines, pinch points, hidden collections.

02 Keep the plan as the source of truth
Building from the drawing's own scale kept the model honest. Reviewers trusted it because it matched the plan.

03 Design the views around the buyer
Camera views that follow the buyer's route turned a layout review into a rehearsal of the customer visit.

Built with **Claude** · **Three.js** (WebGL) · **single HTML file** from the 2D floor plan | Prepared by Havish M Consulting · Figures indicative; validated metrics available on request.
