CLIENT CASE STUDY · LIGHTING & ELECTRICAL DISTRIBUTION · LEADERSHIP

GENAI FOR BUSINESS PLANNING · 24 LEADERS · FOUR FUNCTIONS

# Planning with GenAI

A GenAI programme built around the leaders' own annual plan: from first prompts to a working planning cockpit, with customer-facing prototypes built by the teams along the way.

11 → **5.5** weeks for the annual planning cycle

**4** sessions
Leadership workshops
**on their own planning problems**

**24** leaders
Leaders enabled
**sales, product, ops, finance**

**9** prototypes
Use cases prototyped
**three featured below**

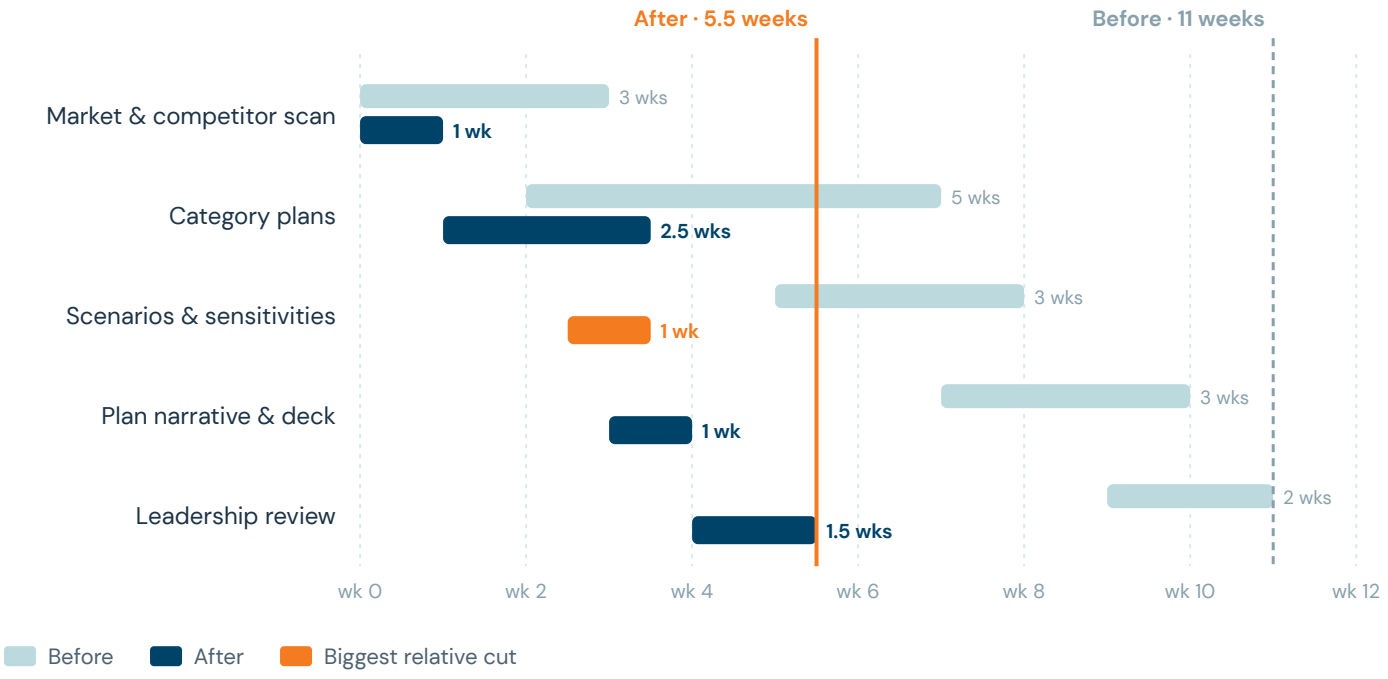

**60** %
Faster first draft of the plan
**category narratives & scenarios**

Rings: one segment per workshop; 23 of 24 leaders completing workshops, with 19 using GenAI weekly inside; nine prototypes, the three featured in white; 60% faster first draft. Figures indicative; validated metrics available on request.

## 01 Where five and a half weeks were saved

Annual planning cycle · weeks per planning step, before and after · indicative

BIGGEST CUT
**Scenarios: 3 weeks → 1**
One base case rebuilt by hand became base, upside and downside in minutes.

CATEGORY PLANS
**5 weeks → 2.5**
Plans no longer built purely bottom-up in workbooks; Excel with GenAI ran the scenario models.

PLAN NARRATIVE & DECK
**3 weeks → 1**
Drafted from the numbers, refined by leaders, instead of written from scratch each year.

OVERALL
**Steps now overlap and start earlier**
The cycle closes at week 5.5 instead of week 11, with leadership review starting at week 4.

## 02 Seven steps from curiosity to a roadmap

The programme journey · what leaders left with at each step

**1 · DISCOVER · Baseline & pulse check**
Captured where each leader started and what they expected.
- Readiness profile per leader
- Expectations and concerns

**2 · DISCOVER · Leadership one-to-ones**
Where the annual plan takes time, and where sharper answers are needed.
- Pain-point map by function
- Questions to solve in the room

**3 · DESIGN · Use-case assessment**
Candidates scored on value, feasibility and risk.
- Long list of use cases
- Shortlist for workshops

**4 · BUILD · Workshops on their own problems**
Market scans, category plans, scenarios, narratives, proposals.
- Prompt library for planning
- Responsible-use guidelines

**5 · ADOPT · Hackathon**
Cross-functional teams built working prototypes with GenAI-assisted building.
- Working prototypes
- Presentations to leadership

**6 · ADOPT · Showcase & assets**
A leadership panel judged value and feasibility.
- Winning use cases
- Asset repository

**7 · SCALE · Roadmap & tracking**
So prototypes become practice.
- Six-month roadmap
- Owner and milestone per use case

## 03 What the leaders built

Three of the nine prototypes · illustrative replicas with synthetic data

PLANNING COCKPIT
### Build next year's plan, then let GenAI write it up
Used by leaders across functions

1. **Set assumptions** for growth, price and share gain by category, or pick base, upside or downside.
2. **Plan bridge updates** from last year through market growth, price and share gain to the plan.
3. **Draft the planning memo** from the numbers on screen, then ask follow-up questions.

Numbers first, narrative second: assumptions stay with the leader.

LIGHT & SAVINGS STUDIO
### Show a customer what LED saves, before they buy
Built by the sales team in the hackathon

1. **Pick a space** and switch from legacy lighting to LED; add occupancy sensors and daylight dimming.
2. **See light levels** as a lux heat-map, with daylight across the time of day.
3. **Energy, AED savings, $CO_2$ and payback** update per space, with 10-year cumulative cash.

Energy value quantified per customer without specialist time.

BOQ TO QUOTATION
### From a consultant's BOQ to a priced quote in minutes
Built by the projects team

1. **Read each BOQ line** and match it to catalogue items on specification: type, watts, CCT, IP, beam.
2. **Score each match** for confidence; pick alternatives and set the target gross margin.
3. **Write the cover note**; low-confidence lines are reviewed by exception.

Tender responses no longer wait on line-by-line matching.

## 04 Four pain points, four fixes

The challenge → how leaders plan and sell now

BEFORE
**Planning by spreadsheet**
Category plans built bottom-up in workbooks, with scenarios slow to run and harder to explain.

PLANNING COCKPIT

AFTER
**Scenarios in minutes**
Base, upside and downside run quickly; the plan narrative is drafted from the numbers.

BEFORE
**Curiosity, little practice**
Leaders had tried chat tools, but not on planning, pricing or customer proposals.

WORKSHOPS ON REAL WORK

AFTER
**Structured prompts**
Role, context, task, format and constraints, applied to planning tasks every week.

BEFORE
**Value story hard to tell**
Energy savings sell lighting, but quantifying them for each customer took specialist time.

SAVINGS STUDIO

AFTER
**Value per space**
Energy, AED and payback shown for each customer space, not just specs and price.

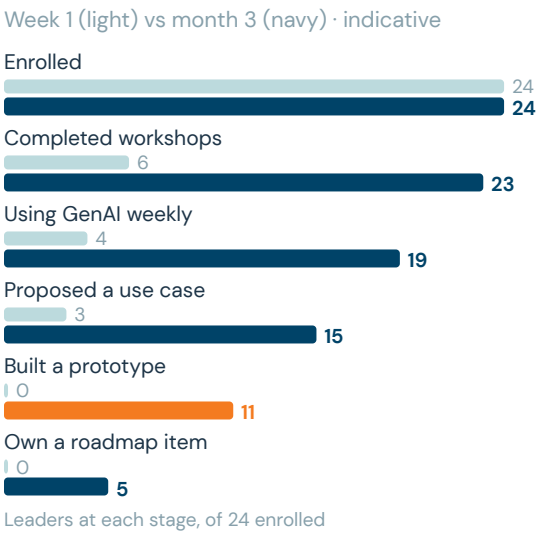

BEFORE
**Slow quotations**
Matching consultant BOQs to the catalogue line by line delayed responses to tenders.

BOQ-TO-QUOTE ENGINE

AFTER
**Spec-matched quotes**
Matched with confidence scores and reviewed by exception.

## 05 Adoption funnel

Week 1 (light) vs month 3 (navy) · indicative

Leaders at each stage, of 24 enrolled

## 06 What changed

Before → after, by dimension

| | | |
|---|---|---|
| GENAI USE | Occasional, personal experiments | → **Structured prompts on planning tasks** |
| PLAN NARRATIVE | Written from scratch each year | → **Drafted from the numbers, refined by leaders** |
| CUSTOMER VALUE | Product specs and price | → **Energy, AED and payback per space** |
| IDEAS | Discussed, rarely built | → **Prototyped, judged and on a roadmap** |

## 07 How HMC ran it

- **2 weeks · Discover** — Baseline assessment, pulse check and one-to-ones; readiness baseline and use-case long list.
- **1 week · Design** — Curriculum built backwards from the annual plan, on realistic data, with HMC's safety framework.
- **4 workshops · Build** — Prompting for planning, scenarios and narratives, prototyping customer tools.
- **1 hackathon · Adopt** — Teams presented prototypes; a panel judged value and feasibility.
- **6-month roadmap · Scale** — Prioritised use cases with owners, tracking and onboarding recaps.

## What any leadership team can borrow

**01 · Teach on the real work**
Leaders adopt GenAI faster when the first prompt is about their own plan, not a generic example.

**02 · Numbers first, narrative second**
Let the model write from the scenario, and keep the assumptions in the leader's hands.

**03 · End every workshop with a build**
A working prototype turns enthusiasm into a roadmap item with an owner.

Built with **GenAI assistants** · **Structured prompting** · **Excel** · **GenAI-assisted building** · **HMC safety framework** | Prepared by Havish M Consulting · Figures indicative; validated metrics available on request.
