CV–JD Match Copilot

Read every CV like your best recruiter, in seconds. A GenAI copilot matches each CV to the job description, scores it on criteria the hiring manager controls, and hands the panel questions written for that candidate.

~~32~~ → 9 recruiter hours per requisition

2 days
Time to a scored shortlist
▼ from about 6 working days

7 criteria
Scoring criteria, weighted by the hiring manager
transparent, explainable

12 questions
Personalised questions per candidate
grounded in the CV itself

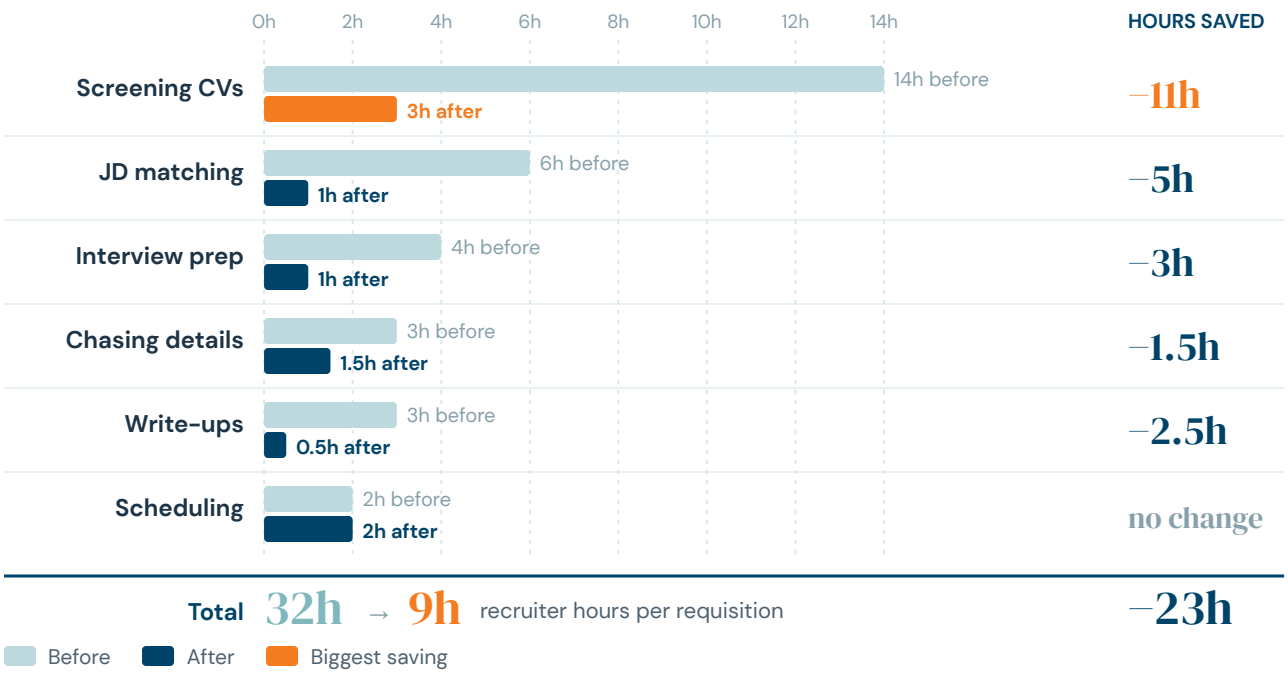

70 %
Recruiter time saved per requisition
32 → 9 hours

Rings: 2 of the earlier 6 days; the seven criteria at their balanced weights; one segment per question; 70% saved with the remaining 9 of 32 hours inside. Figures indicative; validated metrics available on request.

01 Where the recruiter's 32 hours went

Hours per requisition by activity, before and after · indicative

BIGGEST WIN
Screening CVs: 14h → 3h
Reading every CV in full was the largest single block of work. Summaries and evidence highlights now take seconds.

PARETO
Two activities, 20 of 32 hours
Screening and JD matching together held most of the effort, so that is where the copilot was aimed first.

SHARPER, NOT JUST FASTER
Interview prep 4h → 1h
Panels receive a ready interview kit: personalised questions, red flags and strengths to confirm.

LEFT ALONE
Scheduling stays at 2h
The copilot prepares; it does not take over coordination or the decision.

02 One screen, four modules

What the recruiter sees for every candidate

CV in · PDF, Word or text + JD from the library or pasted → Roles like **EHV substation execution**, **transmission line construction** and **HR analytics**

01
SCREENING STUDIO
Match a CV to the JD, with evidence
- Matched skills light up in the CV: must-have, good-to-have, numbers
- Score builds from seven criteria
- Career timeline shows tenures and gaps

→ Match score with evidence

02
SHORTLIST BOARD
Set the weights, watch the ranking change
- Hiring manager moves a weight; every candidate is re-scored
- Coverage matrix: JD skills × candidates
- Evidenced, listed only, or not found

→ Ranked shortlist

03
INTERVIEW KIT
Questions written for this candidate
- Questions quote the candidate's own CV
- Probe missing must-haves, gaps and short stints
- Red flags with severity and evidence

→ Kit for the panel

04
CV COPILOT
Ask anything about the candidate
- Quick summaries and suggested questions on demand
- Rule-based answers offline; a large language model for live, open-ended answers
- Grounded in the CV and JD

→ Plain-English answers

03 A score the hiring manager owns

Weights for the seven criteria in each preset · points out of 100

	Balanced	Skills-first	Experience-first
Must-have skills	30	42	22
Good-to-have skills	12	18	8
Experience fit	16	10	28
Domain relevance	12	10	16
Education & certifications	8	5	6
Career stability	10	6	12
Quantified impact	12	9	8
Weights sum to	100	100	100

Low → high weight · Heaviest criterion in the preset

THE RULE THAT BEATS KEYWORDS
A skill counts fully only when shown in work history
Lists alone earn partial credit, so buzzword-heavy CVs no longer float to the top.

- **Evidenced** — used in work history
- **Listed only** — partial credit
- **Not found** — a gap to probe

THREE STARTING POINTS
Balanced, skills-first, experience-first
Must-have skills lead in two presets; experience fit leads when the role calls for seniority. The hiring manager can move any weight.

FAIR USE, BY DESIGN
No scoring on age, gender, religion or photos
Protected attributes are kept out of the score entirely.

04 Four pain points, four fixes

Before → after

BEFORE
Volume of CVs
Large applicant pools from portals, referrals and agencies, in mixed formats, each read in full.

SUMMARY + EVIDENCE

AFTER
Read in seconds
Summary and evidence highlights for every CV, PDF, Word or text.

BEFORE
Keyword screening misses
Buzzword-heavy CVs passed; strong candidates who described work differently were missed.

EVIDENCE-WEIGHTED

AFTER
Seven-criteria score
Weights set by the hiring manager, not implicit and varying by recruiter.

BEFORE
Red flags found late
Gaps, short tenures and unsupported claims surfaced in interviews, not before them.

FLAG EARLY

AFTER
Flagged before shortlisting
Each flag carries a severity and the evidence behind it.

BEFORE
Generic interviews
Panels used the same question list for everyone, so strong claims went untested.

PERSONALISED KIT

AFTER
Questions per CV
12 questions per candidate; the recruiter decides, the copilot prepares.

05 Same week, not next

Before (light) and after

Days to a scored shortlist
Before · about 6 working days
After · 2 days

Recruiter hours per requisition
Before · 32 hours
After · 9 hours

Figures indicative

06 Human decision

Machine preparation, people make the call

Nothing auto-rejects
Recruiters review every shortlist.

Rules the TA team can read
Explainable scoring first, GenAI on top for summaries, questions and chat.

Feedback tunes the model
Pilot feedback adjusts the taxonomy and weights.

New roles as taxonomy, not code
Power, projects and HR role families to start.

07 How HMC ran it

1 week	**Discover**	Shadowed recruiters and hiring managers: must-haves, trusted signals, red flags. Screening rubric per role family
2 weeks	**Design**	Seven weighted criteria, skills taxonomy, fair-use rules. Scoring model and guardrails
4 weeks	**Build**	One screen: upload, score, timeline, questions, flags, chat. Working copilot
Pilot roles	**Adopt**	Live requisitions; panels get the kit beforehand. Pilot playbook
∞ ongoing	**Scale**	Role by role; ATS integration on the roadmap. Roll-out plan

What any TA team can borrow

01
Evidence beats keywords
Count a skill fully only when the CV shows it being used; lists alone earn partial credit.

02
Let the hiring manager own the weights
A transparent score with adjustable weights earns trust that a black box never will.

03
Prepare the panel, don't replace it
Personalised questions and red flags make interviews sharper; people still make the call.

Built with **Skills taxonomy** · **Rule-based scoring** · **Large language model** · **PDF & Word parsing** · **Fair-use guardrails** | Prepared by Havish M Consulting · Figures indicative; validated metrics available on request.
