MONTHLY HR MIS · ONE VBA MACRO · EXCEL ONLY

# The HR report that builds itself

HR spent two full days every month turning an employee master into a people MIS. A VBA macro now does it: pick the month, press Run, and the pivots, charts and checks are ready in under two hours.

~~16~~ → **2** hours to build the monthly HR MIS

**2** hours
Monthly HR MIS turnaround
▼ from 2 full working days

**88** %
Time saved every cycle
▼ 16 hours down to 2

**0** per month
Manual errors in the published MIS
▼ from 6–8 corrections a month

**168** hours
HR hours freed each year
▲ redirected to strategic HR work

Rings: 2 of the old 16 hours (old 16 inside); share of time saved; up to 8 monthly corrections, now none; one segment per month of the year. Figures indicative; validated metrics available on request.

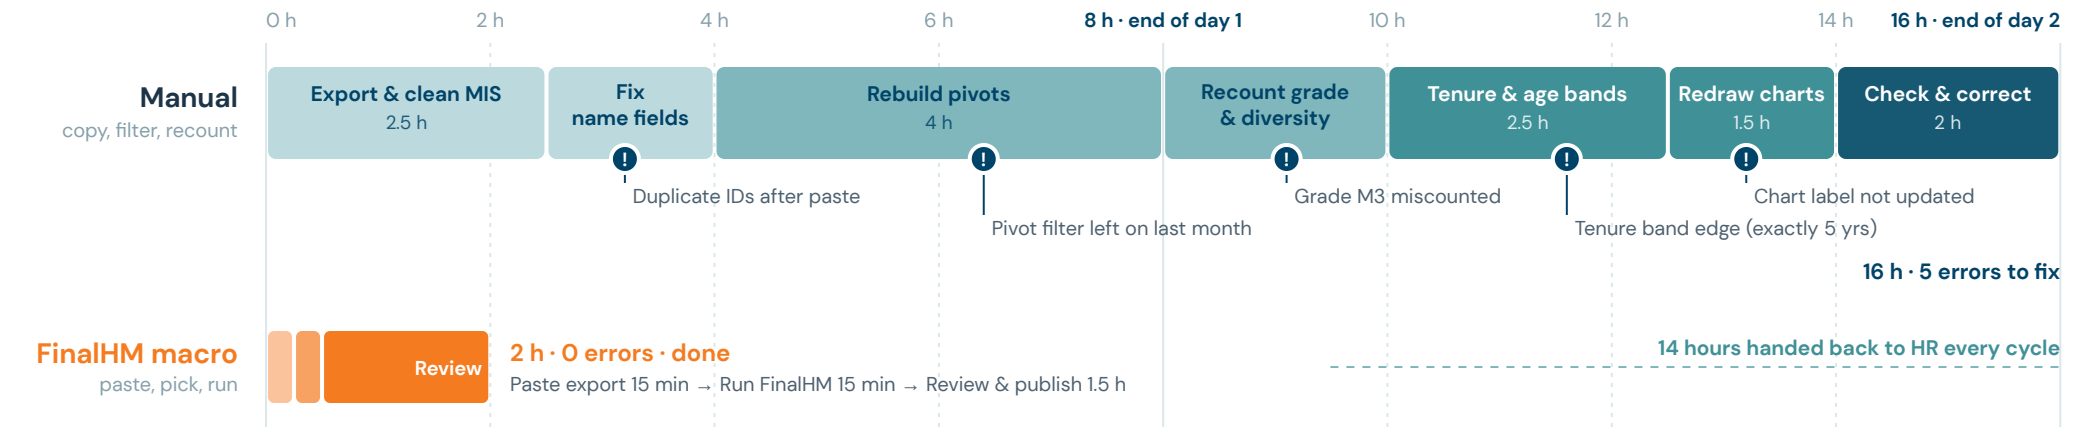

## 01 Same report, two ways

One monthly MIS build, hour by hour · manual lane vs the FinalHM macro

BEFORE
**Seven manual steps across two days**
Export, clean, rebuild a dozen pivots, recount, re-band and redraw. The steps never changed; only the month did.

WHERE ERRORS CREPT IN
**Five failure points per cycle**
Duplicates after paste, stale pivot filters, miscounts and band edges, each needing a fix after publishing.

AFTER
**Paste, pick, run**
Half an hour of machine work, then review. Reconciliation checks run inside the macro, so every total ties back.

Step durations and error points as modelled on the case-study page; indicative.

## 02 The workbook, as delivered

Generated dashboard (Aug-22) · the FinalHM macro · what one press of Run does

```
Sub FinalHM()

Worksheets("MIS").Select
If Range("D1").Value = "Name of the employee" Then
Call ConcatenateNames
Else
End If

Dim PSheet As Worksheet
Dim DSheet As Worksheet
Dim PCache As PivotCache
Dim PTable As PivotTable
Dim PRange As Range
Dim lastRow As Long
Dim LastCol As Long
```

**FinalHM in the VBA editor**: selects MIS, concatenates names if needed, deletes and recreates the PivotTable sheet. Modules: Mod_Final, Mod_FinalCharts, Mod_FinalSnippets.

1. **Totals**: 422 employees · Brazil 57 · India 365 · 43 women · 10% diversity
2. **Grade × gender**: headcount by grade group, men and women
3. **Tenure groups**: five bands set as of month end
4. **Age groups**: four bands · average age 37.96
5. **Charts**: tenure and age shares drawn by Mod_FinalCharts
6. **Talent landscape**: pivot by SBU and function, split by gender
7. **Month selector**: one cell drives every count: Aug-22 shown

Only aggregate pivots are shown. The employee master (MIS sheet) holds personal data and is left out of this poster.

MACRO STEPS
### One press of Run

| | |
|---|---|
| 01 | Select the MIS sheet |
| 02 | Join first, middle and last names |
| 03 | Delete last month's PivotTable sheet |
| 04 | Insert a fresh PivotTable sheet |
| 05 | Build the pivot cache from MIS |
| 06 | SBU × function × gender pivot |
| 07 | Totals, grade and diversity |
| 08 | Band tenure and age as of month end |
| 09 | Draw tenure and age charts |
| 10 | **Tie every total back to MIS** |

## 03 Four pain points, four fixes

Before → after

BEFORE
**Time drain**
Two full days a month by hand, so insight reached leaders late.

RECORD THE ROUTINE

AFTER
**Under 2 hours**
Mostly review. Report day is now a morning task.

BEFORE
**Error avalanche**
Manual counts, filters and copy-paste put vital HR data at risk every cycle.

CHECKS IN THE CODE

AFTER
**Totals reconcile**
Brazil + India, grade, tenure, age and landscape sums all tie back to MIS.

BEFORE
**Stale pivots, edited filters**
A dozen pivots rebuilt by hand; every filter and formula edited for the new month.

REBUILD, DON'T PATCH

AFTER
**Pick the month in one cell**
The macro deletes and recreates the pivots: no leftovers from last month.

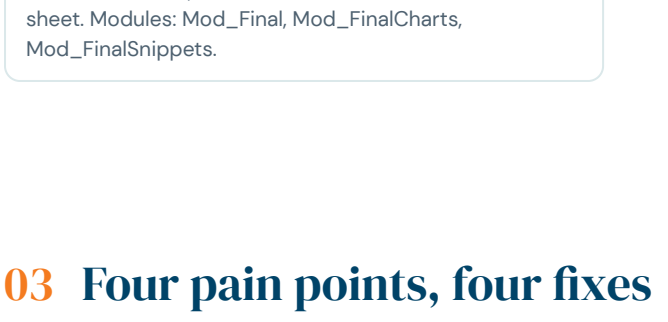

BEFORE
**Many cuts of one data**
Geography, grade, gender, tenure, age and talent landscape checked by eye.

MODULAR CODE

AFTER
**New cuts, same button**
Talent landscape by SBU and function, Brazil and India views, in one run.

## 04 An analyst's month

Working days, by time spent on the MIS · indicative

**2.5 days** → **2 hours**
a month on the MIS, incl. post-publish fixes
Full day · Part day (fixes) · 2 h run · Strategic HR

## 05 Corrections by section

Average errors per monthly report · indicative

**8.0** → **0** average errors per monthly report, all sections

## 06 How HMC ran it

| | | |
|---|---|---|
| 3 days | **Discover** | Sat through a full monthly build; mapped time and error hotspots. |
| 1 week | **Design** | One MIS sheet, one dashboard; fixed tenure, age and grade bands. |
| 2 weeks | **Build** | The FinalHM macro: pivot cache, pivots, charts, reconciliation. |
| 1 cycle | **Adopt** | Parallel run with the manual report; both matched, manual retired. |
| ∞ ongoing | **Scale** | New views added to the macro, not extra hours. |

## What any HR team can borrow

**01**
**If the steps repeat, record them**
A routine that is the same every month is a macro waiting to be written.

**02**
**Rebuild, don't patch**
Deleting and recreating the pivots each run means no stale filters or leftovers from last month.

**03**
**Put the checks in the code**
When totals reconcile automatically, review time goes into reading the numbers, not checking them.

Built with **Excel VBA** · **PivotTables** · **Excel charts** · **HRMS export** | Prepared by Havish M Consulting · Figures indicative; validated metrics available on request.
