CLIENT CASE STUDY · RETAIL · CUSTOMER EXPERIENCE

POST-DELIVERY FEEDBACK · 15 COMMENTS · SIX SLA DIMENSIONS

SLA Guidelines & Customer NPS

GenAI mapped every customer comment to a service SLA, and showed that being on time was not the same as being good enough.

13 → 8 of 15 on time → of those, 8 still felt short-changed

13 / 15
Delivery SLA met
▲ on time within promised window

8 / 15
Perception gaps
▼ met SLA, still felt slow

4 of 6
SLA dimensions breached
communication, support, quality, app

100 %
Comments mapped to an SLA
▲ every verbatim, with evidence

Rings: one segment per comment (on time; perception gap); one segment per SLA dimension (breached in white); full ring = every comment mapped. Based on the 15-comment analysis.

01 Every comment, every SLA, one view

15 comments × 6 SLA dimensions · from the Comment Analysis and SLA Scorecard tabs

CUSTOMER COMMENT (paraphrased from the comment analysis)	Delivery 2–5 days metro — MOSTLY MET	Order comms Update 12–24 h — BREACHED	Support Chat < 2 h — BREACHED	Returns Pickup 2–3 days — PARTIALLY MET	Quality Zero tolerance — BREACHED	App / tech Uptime > 99% — BREACHED
1 Expected earlier; dented pack	Gap				Partial	
2 App updates kept changing	Met	Partial				Partial
3 Rushed handover; box slightly open	Met				Partial	
4 On time; found cheaper elsewhere	Met					
5 Below images; returns complicated	Gap			Gap	Gap	
6 App crashed at checkout	Met					Breach
7 Full window used; felt slow	Gap					
8 Delayed, no alert; chased support	Breach	Breach	Breach			
9 Quick, secure, as described	Met					
10 Colour did not match images	Gap				Breach	
11 Support slow; many follow-ups	Gap		Breach			
12 Tracking not real-time	Gap	Partial				Partial
13 Wrong item; replaced fine	Breach			Met	Breach	
14 Acceptable; nothing stood out	Gap					
15 In SLA; disruptive last-minute calls	Gap					
Comments per dimension	15 raised	3 raised	2 raised	2 raised	5 raised	3 raised

Met · Met, perception gap · Partial breach · Breach · Not raised

PERCEPTION GAP
On time is not fast enough
8 deliveries landed inside the 2–5 day window, yet customers compared the brand with faster platforms and felt let down (comments 1, 5, 7, 10, 11, 12, 14, 15).

ZERO-TOLERANCE BREACH
Quality SLA broken 4 ways
Dented pack (1), open box (3), colour mismatch (10) and a wrong item (13): breached without anyone tracking them against the guideline.

BREACH
Comms, support and app
Inconsistent tracking (2, 12), no proactive delay alert (8), slow support (11) and an app crash at checkout (6).

THE STANDARD
Engineer more "Comment 9 moments"
Quick delivery, secure packaging, product as described. Comment 14 found everything acceptable, but nothing stood out.

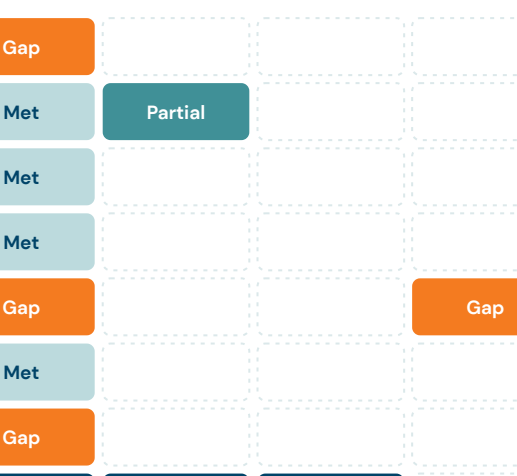

02 Two inputs in, a GenAI report out

Screens from the actual analysis

INPUTS: THE CUSTOMER'S VOICE AND THE COMPANY'S PROMISE

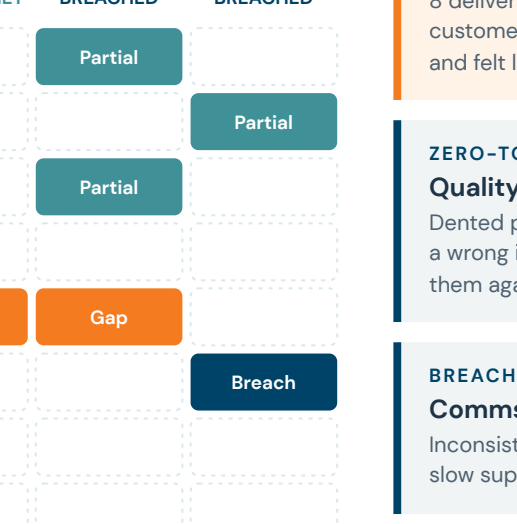

1 **Customer comments**: free text mixing delivery, packaging, app and pricing

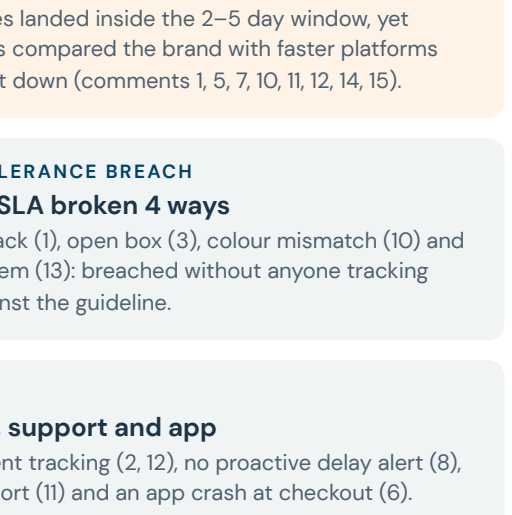

2 **SLA guidelines**: six dimensions with targets, from 2–5 day delivery to > 99% uptime

OUTPUTS: TABS FROM THE FOUR-TAB FEEDBACK VS SLA REPORT

3 **Comment analysis**: dimension, status, observation and SLA implication per comment

4 **SLA scorecard**: guideline, status and the comment numbers behind each

03 Four pain points, four fixes

How CX reads customer feedback · before → after

BEFORE
Feedback as free text
Verbatims mixed several topics in one paragraph; manual tagging was slow and inconsistent.

GENAI MAPPING FRAME

AFTER
Every comment mapped
Each comment tagged to an SLA dimension and status, citing the guideline it tests.

BEFORE
SLA met, NPS missed
"On time" deliveries were counted as success, while customers still felt let down.

SPLIT THE "MET"

AFTER
Met vs perception gap
On-time deliveries split into met and met-with-perception-gap; gaps go to marketing and product.

BEFORE
Issues across six teams
Logistics, app, catalogue, support, returns and packaging each saw only their own slice.

ONE REVIEW, SIX OWNERS

AFTER
Owner and fix date
Each breached dimension assigned to an owning team in a shared action log.

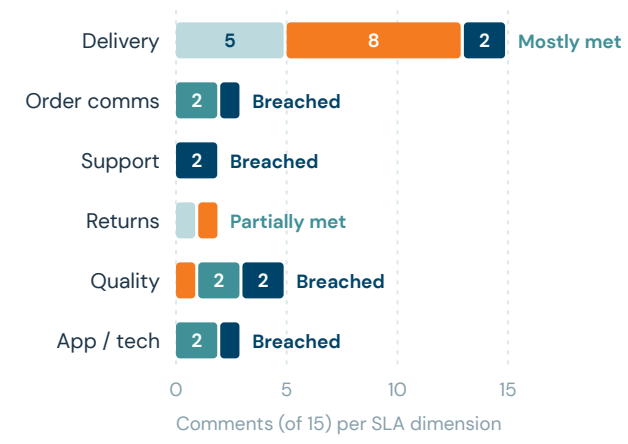

BEFORE
Breaches hidden in averages
Zero-tolerance SLAs (wrong items, tampered packaging) went untracked; NPS was a score without a cause.

FLAG BY COMMENT

AFTER
Score linked to cause
Damaged, open or wrong items flagged by comment number; NPS tied to the SLA gaps behind it.

04 SLA scorecard

Comments per dimension, by status

05 From fixes to NPS

The 15 comments by sentiment · indicative, inferred from comment text

Before — NPS −27

Detractors · 6: 3, 6, 8, 10, 11, 13
Passives · 7: 1, 2, 5, 7, 12, 14, 15
Promoters · 2: 4, 9

After all ten fixes — NPS +67

Detractors · 0:
Passives · 5: 3, 6, 10, 11, 13
Promoters · 10: 1, 2, 4, 5, 7, 8, 9, 12, 14, 15

06 How HMC ran it

2 days	**Discover** — Comments and SLA guidelines gathered; six dimensions and four statuses agreed.
2 days	**Design** — Prompt frame and output template: dimension, status, observation, implication.
1 day	**Build** — Claude read every comment against the guidelines; four-tab HTML report.
2 weeks	**Adopt** — Cross-functional CX review; action log with owners and dates.
1× monthly	**Scale** — Runs on all survey verbatims; perception-gap share tracked with NPS.

What transfers to any customer-facing business

01 — An SLA met is not a customer won
13 of 15 deliveries were on time, yet 8 customers still felt short-changed. Competitors set the expectation, not the SLA document.

02 — Fix upstream, not after delivery
Zero-tolerance SLAs need prevention: scan-verified dispatch and packaging checks at handoff, not better apologies.

03 — Engineer the best moments
One fully satisfied customer showed the standard: fast, secure, as described. Design for more of those on purpose.
