AI-POWERED AD ANALYZER · COLOUR, COPY AND CALL-TO-ACTION

Ad Creative Intelligence

From "I like it" to "here's why". An AI ad analyzer gives every creative the same thoughtful questions, so the marketing team refines campaigns with evidence-based feedback rather than subjective opinion.

~~39~~ → **86** review index, initial → refined concept (demo rubric)

3 lenses
Core creative lenses
colour · copy · call-to-action

1 framework
Shared review format, 4 dimensions
consistent, actionable feedback

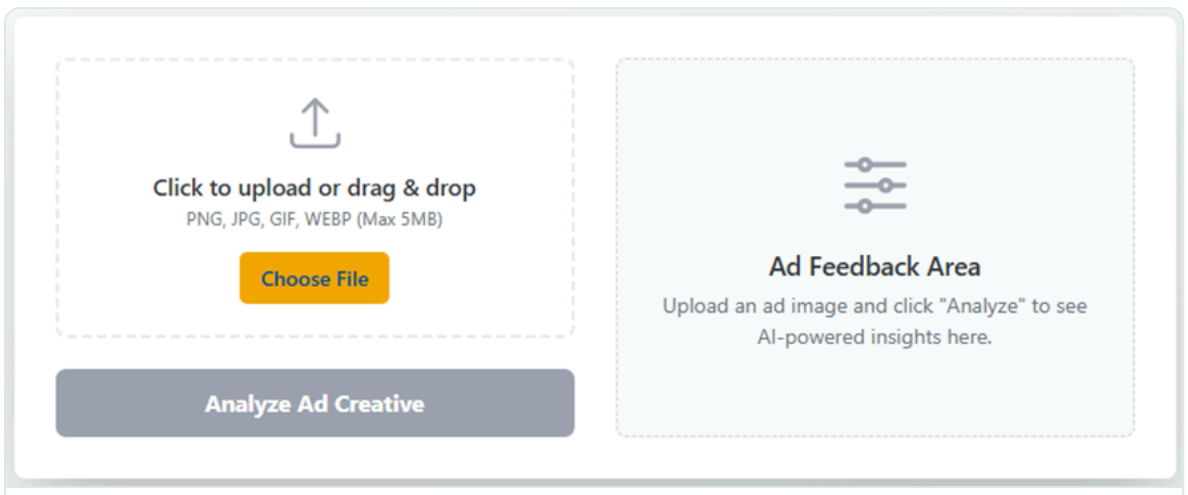

0 → 4.5
CTA score out of 5, demo rubric
the biggest single fix

2 views
Original tool screens
upload experience + analysis

Rings: one segment per lens; rubric weights (colour 25, copy 30, CTA 30, brand 15); refined CTA score with the initial 0 inside; the two original screens. Index and scores are hand-authored illustrations, not campaign performance results.

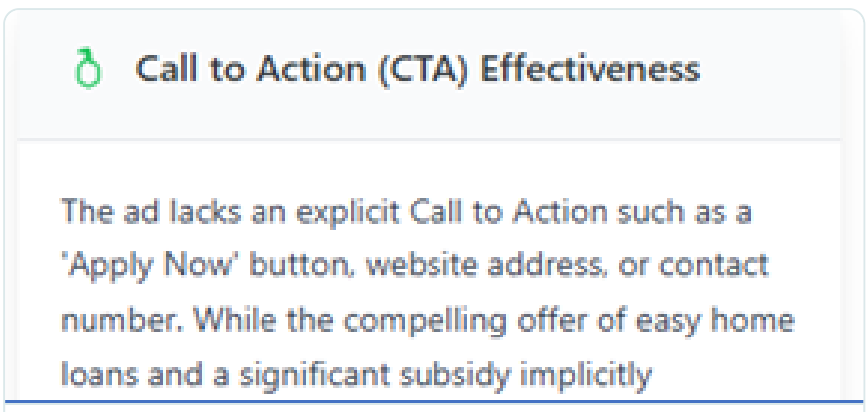

01 The original tool, as delivered

Supplied screens, cropped to the working area · ad creative itself not shown

1 **A simple starting point**: upload or drag an ad (PNG, JPG, GIF, WEBP up to 5 MB), then request a review; insights appear in the feedback area.

01 Upload the creative → 02 Analyze with AI → 03 Refine the creative

2 **A structured response**: the report flagged a missing explicit CTA, such as an "Apply Now" button, website address or contact number.

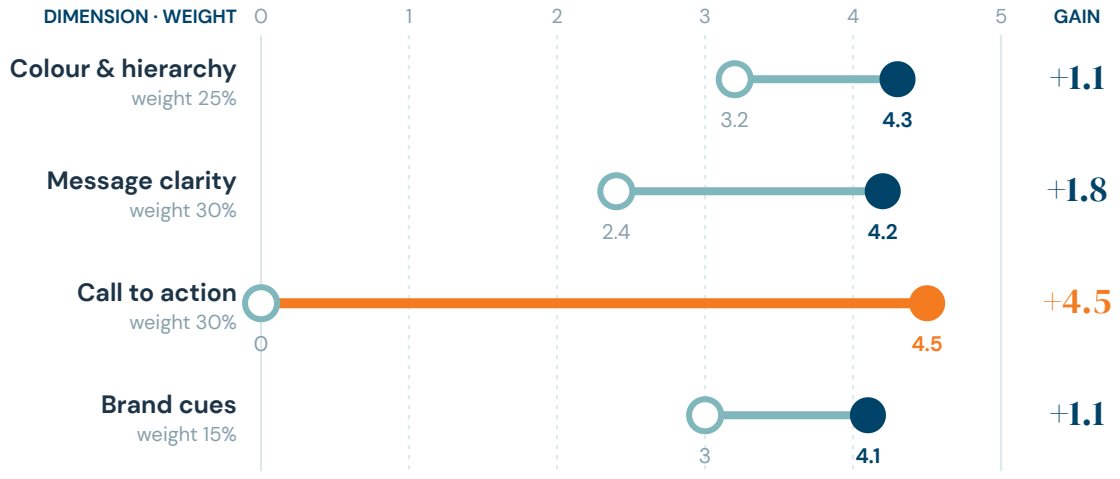

STRUCTURED INSIGHT ON FOUR POINTS

Design tone	Message clarity	CTA effectiveness	Brand alignment
colour palette analysis	ad copy feedback	is the next step visible?	against visible cues

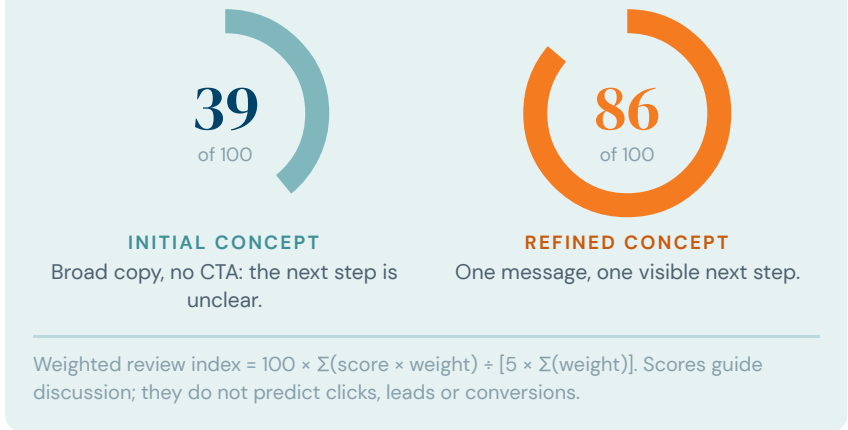

The supplied original interface uses Google Gemini; the later interactive analyzer uses the OpenAI Responses API, with human review throughout.

02 One rubric, two concepts: where the gain comes from

Hand-authored demo scores, 0–5 per dimension · initial (ring) vs refined (dot)

0 Absent or unclear · 3 Usable, with revisions · 5 Clear and well supported

Weighted review index = 100 × Σ(score × weight) ÷ [5 × Σ(weight)]. Scores guide discussion; they do not predict clicks, leads or conversions.

01 Lead with one message
A concise headline and one supporting line instead of several competing ideas.

02 Make the action explicit
A visible CTA label connected to a defined next step.

03 Strengthen the hierarchy
Contrast and space separate brand, message and action.

03 Four pain points, four fixes

Unstructured review → AI-assisted review · illustrative workflow comparison

BEFORE
Different opinions
A visual triggers many reactions; reviews start from personal preference.

CONSISTENT LENSES

AFTER
Same questions, every time
Colour, copy and CTA as consistent review lenses for every creative.

BEFORE
Unclear messages
Strong design, but broad comments such as "make it stronger".

COPY FEEDBACK

AFTER
Specific observations
Notes on the headline and supporting copy, not general reactions.

BEFORE
Missing next steps
Reviewers assume the next step is obvious to the audience.

CTA CHECK

AFTER
Action made visible
Checks whether an action and destination are actually on the creative.

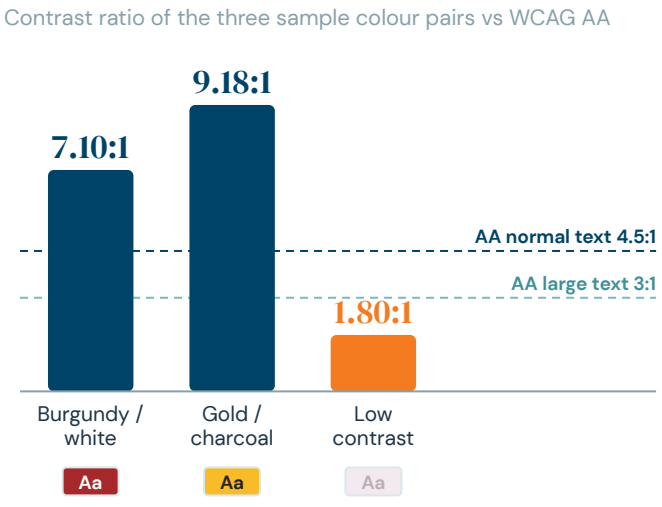

BEFORE
Inconsistent reviews
Feedback scattered across conversations; reasoning behind changes is lost.

STRUCTURED OUTPUT

AFTER
Prioritised revisions
Recommendations that explain what to revise, for the team's final judgement.

04 Legibility you can measure

Contrast ratio of the three sample colour pairs vs WCAG AA

05 Behind the interface

From an image and brief to reviewable observations

01 · CREATIVE · IMAGE + CONTEXT
Start with the brief
Audience, intended message and brand guidance.

02 · REQUEST · RUBRIC + SCHEMA
Ask the same questions
Image and brief combined with a rubric and JSON schema.

03 · AI · MULTIMODAL ANALYSIS
Request a review
Observations, recommendations and limits in the evidence.

04 · REVIEW · STRUCTURED FEEDBACK
Choose the revision
A human reviewer validates and hands off the next change.

06 How HMC ran it

1 Discover	**Define the review** — Audience, message and action agreed; a common question set.
2 Design	**Structure the feedback** — Colour, copy and CTA in an anchored rubric.
3 Build	**Connect the AI model** — An upload-to-feedback workflow with structured observations.
4 Adopt	**Review and refine** — An actionable creative-review handoff; humans check claims and brand rules.
5 Scale	**Keep the learning** — A reusable brief and rubric across campaigns.

Make the feedback useful enough to act on

01 Standardise the questions
A consistent review structure makes it easier to compare creative ideas and explain a revision.

02 Connect evidence to action
Pair every observation with a practical recommendation for colour, copy or call-to-action.

03 Keep the team in control
AI provides a first review. People validate brand alignment, claims and the final creative decision.

Built with **Google Gemini** (original tool) · **OpenAI Responses API** · **REST API + JSON** | Prepared by Havish M Consulting · Scores are hand-authored examples, not campaign performance results; qualitative outcome supplied for this case study.
